

The DOHs decision to make Covid vaccines available to children aged 5 to 11 is absolutely shocking, given that

- Covid is over
- these jabs are ineffective against a highly mutated strain, Omicron
- the current strain is mild but highly infectious, needing no intervention
- 90% of the children have natural immunity
- There is a high risk of myocarditis in children taking these vaccines based on a study in Thailand
- Children have a 100% recovery rate with no hospitalisation or complications from Covid
- One has to jab 220,000 individuals to avoid one hospital admission,
- there is excellent treatments for covid and its complications
- These jabs are not fully tested especially for children
- Proper informed consent is not being done at vaccination sites, many of which, are not properly equipped for adverse events
- The jab results in an autoimmune response in the organs, so they are not safe for children with an autoimmune disorder
- Children with a compromised immune system will not be able to produce adequate immunity to the jab
- Leading infectious disease specialists, like , Dr Paul Offit, have come out in the open saying that they refuse to give their children boosters because of the risk of myocarditis
- WHO scientist, paediatrician, Dr Somaya Swaminathan said that there is no data that healthy children need to be vaccinated
- the jab can and does lead to VAIDS
- There is no compensation for jab victims if patients can't prove cause.
- The contents of vaccines have not been divulged by the manufacturers

- Independent researchers from many laboratories have discovered that the vials contain graphene oxide and lipid nanoparticles, both of which are highly toxic
- The vaccine spreads throughout the body and leads to an autoimmunity reaction wherever the spike lands
- the antibodies for these vaccines is almost zero after 8 months, requiring boosters every three months
- Repeated boosters can lead to immune fatigue and render individuals incapable of protecting themselves from common infections like shingles
- In females, the Vaccines often land in the ovaries and can cause menstrual irregularities and render them infertile. Pfizer data 52% of women had menstrual problems.
- Pfizer admitted that only 50% of their vials have the intact mRNA vaccine, meaning that 50% of the people receiving the jab, are receiving a dud, toxic jab. Load shedding -100%
- The CEO of the CDC stated that the vaccinated and those with natural immunity are equally protected
- both the vaccinated and non-vaccinated can spread the virus equally, according to the CEO of the CDC
- The spokesperson for Pfizer admitted to the EU parliament that they did not test the jab for transference because they were traveling at the "speed of science"(sic).
- Fauci admitted recently, after insisting on masking and boosters that the current mRNA vaccines did not give lasting protection
- The Joint Committee for Vaccine Intervention (UK) strongly recommended that children not be given the covid Vaccine because of the low complications and high level of natural immunity.
- Ever since the Vaccines/jabs were approved for children in the EU in 2021, the number of excess deaths in the age group 0 to 14 on week 33 of 2022 shot up by a whopping 750% prompting an urgent investigation into the cause of these deaths by the EU.

- EMA data on vaccine safety and efficacy- 22 children under 17 died. They were perfectly healthy. Dec 2020 to June 2021.
- Article in the lancet has revealed that natural immunity superior to vaccine immunity and lasts over 20 months. 3 times better, Israel study, 27 times superior.
