

Research Database Status Report

Date: 1st June, 2022
Scope: Digital Component A) < 31/12/2018
 B) 1/1/2019 – present
Exec: Internal
Syn: A brief outline of the size and scope of the digital database with image based cues for discerning viewers.

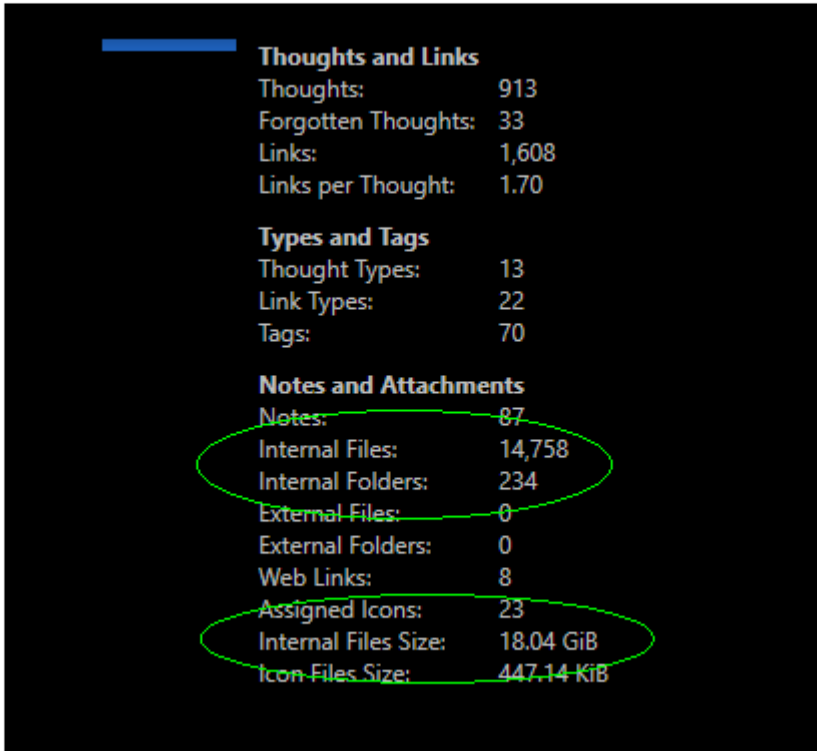

A)

In 2014 the majority of the digitised portion of the research was organised into 12 main “Brain” style intuitively linked and connected database structures – 8 of which are referenced below.

1. John's Digital Database

The mother lode of research data compiled and acquired pre 2014. This brain is used mainly for file reference and crawling and exporting to other brains and for web content development.

BF + GF + YF = 14,758 files in total.

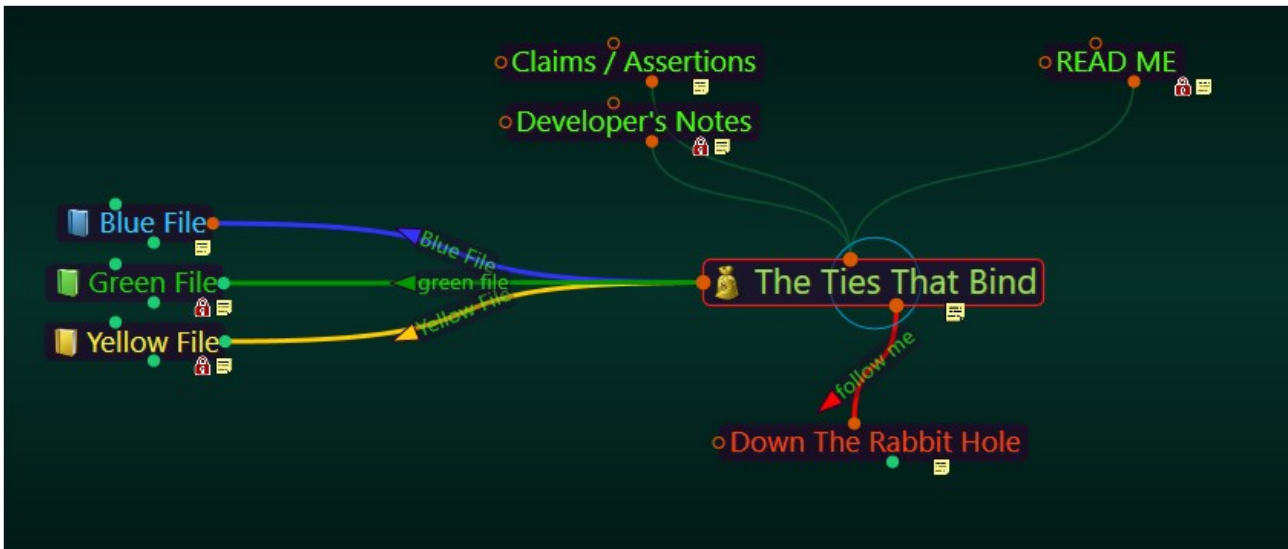

The image shows a screenshot of a digital database interface with a black background and white text. A blue horizontal bar is at the top left. The data is organized into three sections: 'Thoughts and Links', 'Types and Tags', and 'Notes and Attachments'. Several items in the 'Notes and Attachments' section are circled in green.

Thoughts and Links	
Thoughts:	913
Forgotten Thoughts:	33
Links:	1,608

Assigned Icons:	23
Internal Files Size:	18.04 GiB
Icon Files Size:	447.14 KiB

2. The Ties That Bind

"... a pre-determined plan to restructure the global financial architecture" – predominantly GF Summaries and reports presented in an easy to navigate visually interconnected structure.

3. Bernard Glazer (1913-1984)

A truly remarkable story, of a great man, that lay the foundation for an international empire.

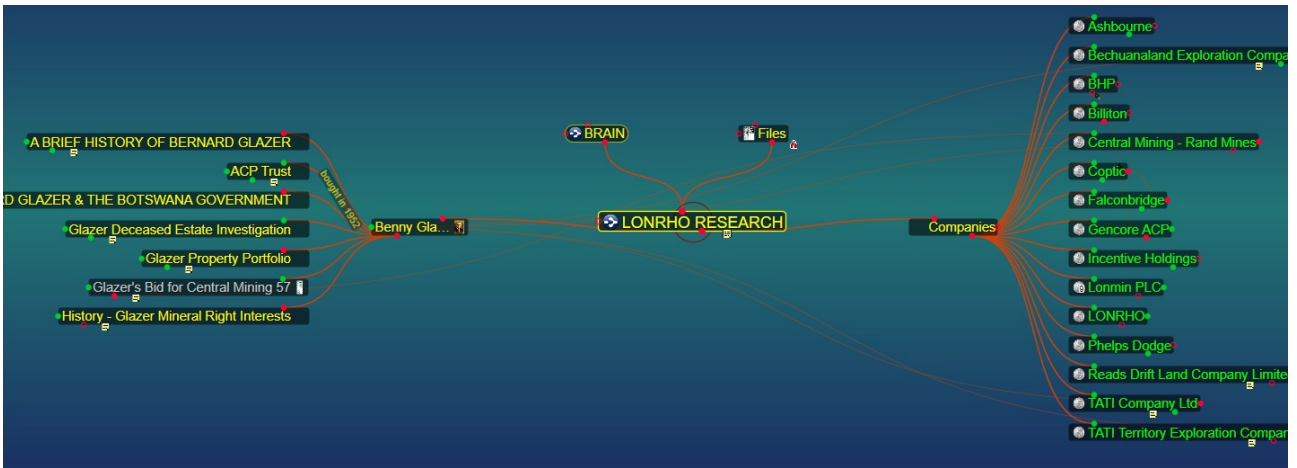

4. BF Botswana

Glazer Mineral Rights - Tati /Bamangwato Concessions 1888-2007

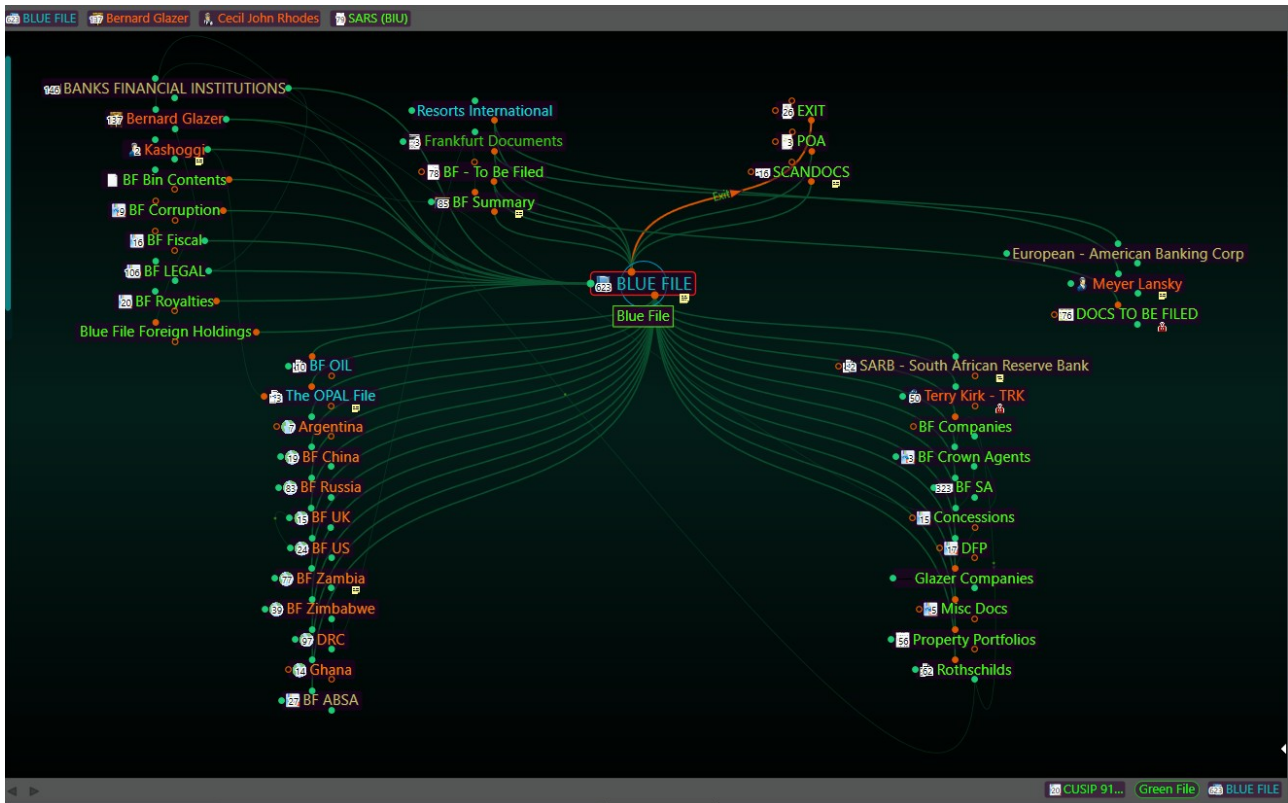

5. Lonrho Research

This Brain contains information on:
Glazer's interest in Lonrho - controlling big in 57/58

6. Blue File

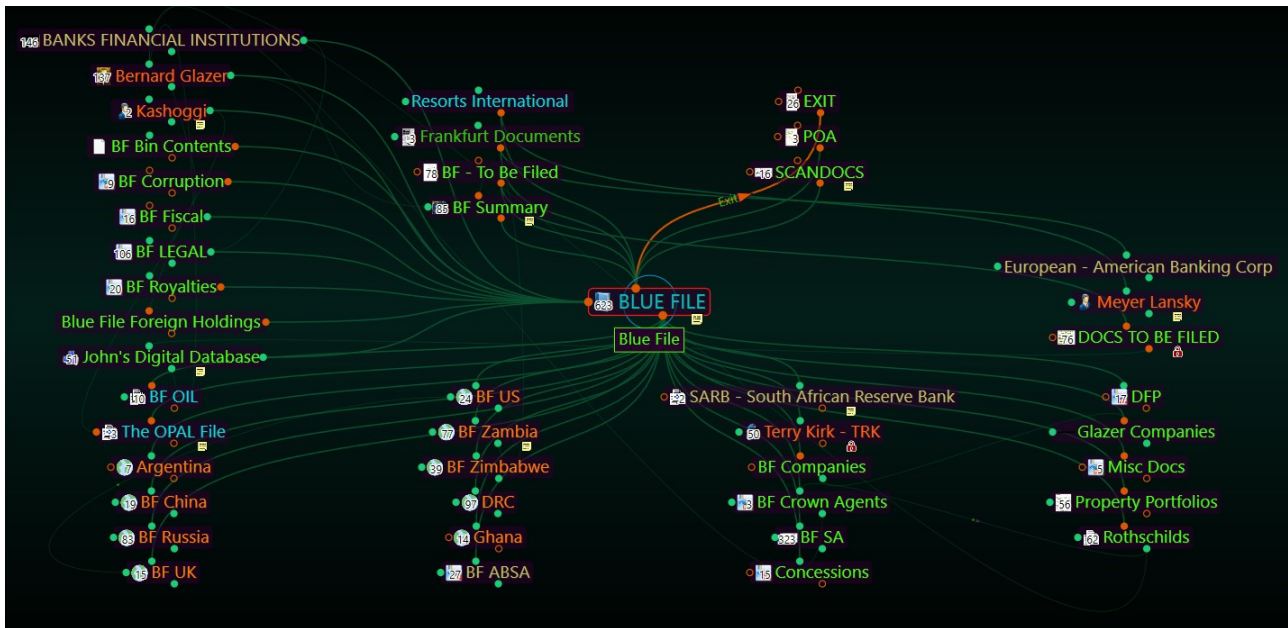

We had no idea where this investigation would lead us or what budget to set aside. We initially focused on Botswana mineral rights and the Tati Exploration Company. We began with all government records of correspondence between SA & Botswana since inception and finally retrieved physical copies of title deeds. Mineral right ownership was further validated with recently declassified correspondence from The UK Commonwealth Foreign Office (CFO). Nathan Werksman, Bernard Glazer legal representative, defended a takeover bid 21 January 1960 by the CFO to specifically exclude mineral right ownership and trading rights from any sale. The CFO bid via Syfrets Executor & Trust Co. Ltd was unsuccessful for a transaction value of ten times what Glazer purchased for Tati Company 5 years later(6 Million Pounds).The defence of mineral rights 'then', confirmed the relevance as opposed to the arrogant denials made by Administrators in 2003.

In order to establish what Glazer had purchased by the time of his passing in 1984 we had to go back to the beginning. Reconstruction of 100 year history involved following mineral right ownership in various countries from the inception of Rhodes Companies (1888) and management by the Crown Agents for Overseas Governments. Also, to complete the matrix interconnectivity and symbiotic corporate activity over a hundred years, hundreds of local and international Companies were researched, social network charts were constructed manually, dusty archives scoured and interviews with the intelligence community, Academia, Retirees, & Media. This daunting task received the cooperation of numerous individuals from every sector. Their unselfish contribution to establish the truth remains the basis for this salutation. The object was not to audit financials rubber-stamped by the Glazer Will Trustees but to illuminate historical misrepresentation.

7. Green File

9/6/97

CUSIP NUMBER 912810 BU1

For information

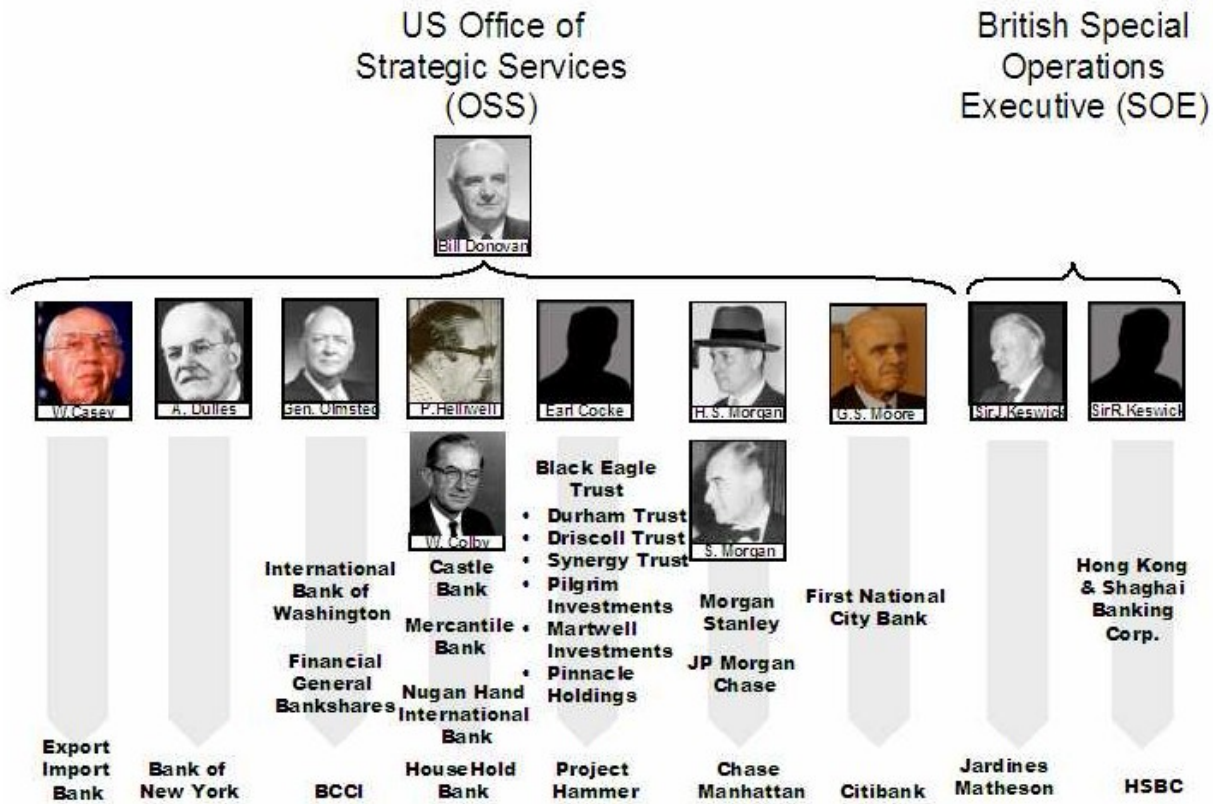

Regarding hard copies of Treasury Bonds - the New York Fed reports that by the close of 1980, some 94% of the total outstanding marketable government securities, and about 99.5% of total outstanding federal agency securities, had been **converted** to computerised book-entry form. The CUSIP number which you have is 912810 BU1 through to 912810 BU17 (total \$147 billion), therefore BU1 is BU2 and vice versa.

From the security display, there are 2 amounts outstanding of 4224MM, (that is, BU1 and BU2) but payable at maturity is only one amount of 4224MM (?). It would appear that the other 15 CUSIP's are represented as listed in the security display. There are naturally special rules and regulations which apply to this issue. The security is **DISCRETELY** callable with 120 days notice from issuer, in other words, individual and distinct in nature.

This distinctiveness can be illustrated as follows:- A Treasury survey of ownership 31 August 1981 reflects the amount outstanding for 2000-05 as 4246MM made up as follows:- 2178MM US Government account, 1381MM held by other investors and I have a record for the balance, ie insurance companies, commercial banks, savings and loan associations. As of 30 September 1996, bills outstanding for 15 May 2000-05 US governmental accounts 2177MM, all other investors 2047MM - total 4224MM. The issue from the outset was in a top level system in a governmental agency account and as such, a discrepancy results. The auction, dated 8 May 1975, indicated that Treasury had accepted \$0.75 billion of the \$1.8 billion of tenders received and in addition, \$0.85 billion of tenders were accepted at the average yield price from Government accounts and from Federal Reserve Banks for themselves as agents of foreign and international monetary authorities (total therefore \$1.6 billion). Treasury Bonds, Investment Series B - 1975-80 do not reflect a maturity schedule outstanding in the years 2006 through to 2010 for bonds designated 8.25% interest at the average-yield price of 99.45. The results of the auction dated 8 May 1975 indicate that there was an allocation that was prescribed pending the outcome of the lowest yield interest rate that was announced 9 May 1975, that is non-competitive tenders. Treasury has also indicated that this is a valid obligation and therefore accept that they will honour and exchange. The B-series bonds consists of bearer, book-entry and registered and Treasury would not be familiar with these serial numbers as there are no serial numbers in book-entry. They would also have no record of that which is maintained in the commercial sector. The Federal Reserve is familiar but the Claims Division of Treasury asked me not to contact the Federal Reserve (?)

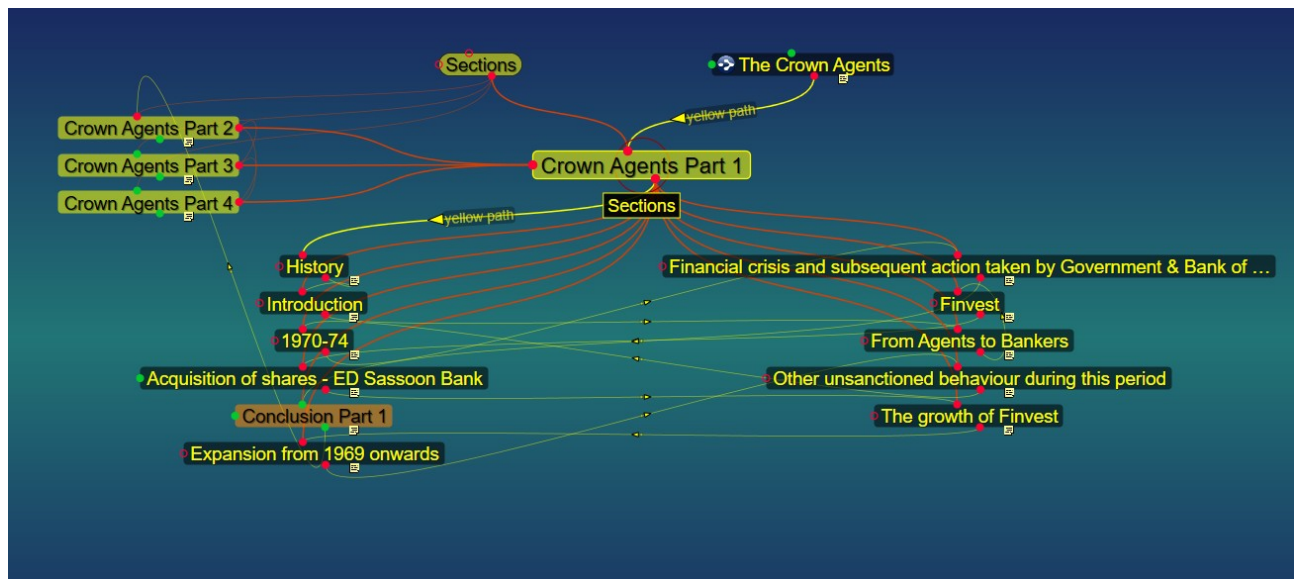

8. Crown Agents

US Intelligence Banking History (from the roots of the Black Eagle Trust and the Golden Lily)

CROWN AGENTS UK

PART I

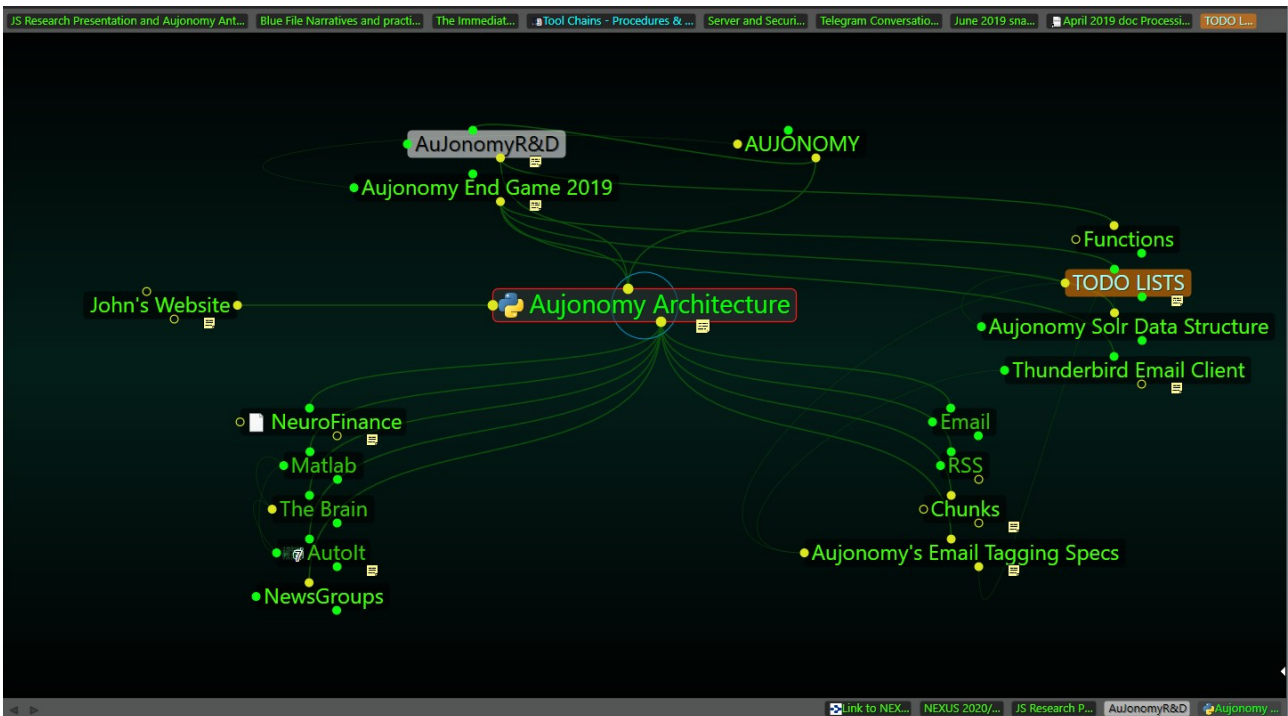

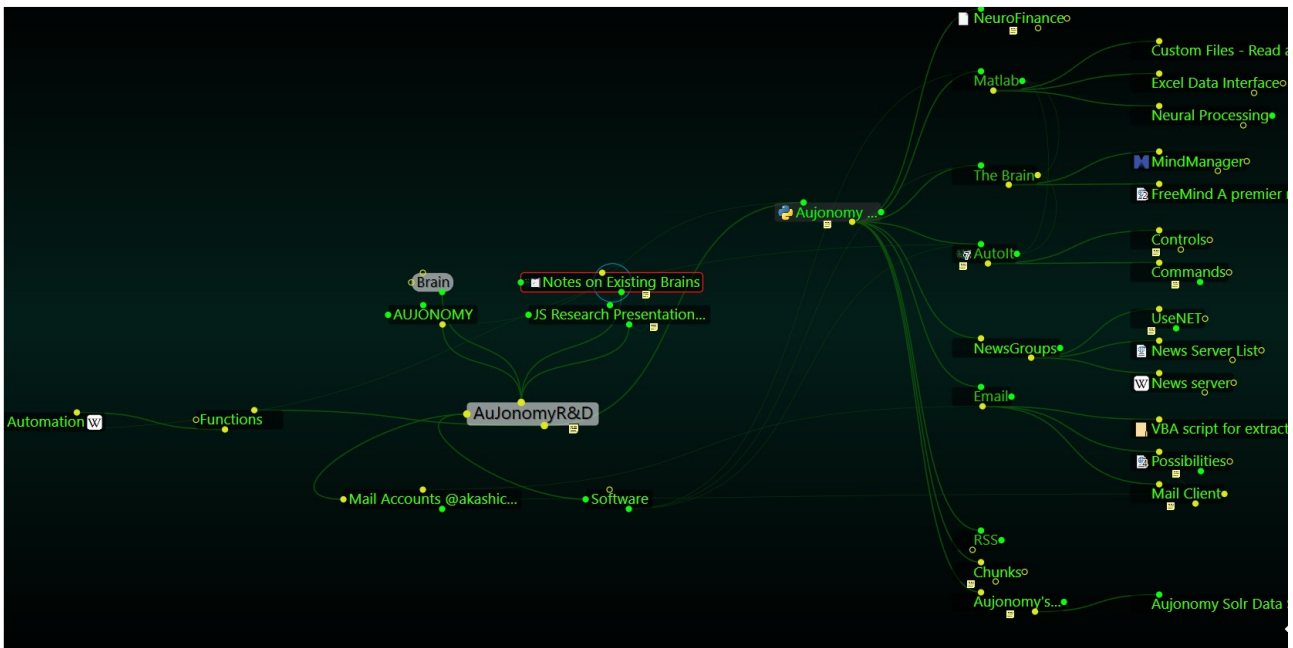

The Development of Aujonomy

Aujonomy was created to automatically harvest web resources received via email predominantly but also Telegram bot and desktop console application. This Brain has all the details on how it was built:

Thoughts and Links	
Thoughts:	738
Forgotten Thoughts:	5
Links:	876
Links per Thought:	1.18

Internal Files Size:	410.8 MiB
Icon Files Size:	2.3 MiB

For Instance – Look Closely

B) Since 2019 additional resource collection by Aujonomy into .pdf .doc .html .img etc archives (yet to be databased into Brains) amounts conservatively to:

- 19,291** x video files totalling **897GB**
- 9,681** x HTML pages totalling **14.8GB**
- 1542** x .pdf and .doc(x) files totalling **6.73GB**
- 925** x .mp3 audio files **7.48GB**

with an additional:
